

The Best Way to Manage Your Tanks.

We Make Your Plant Run Better.

Tank Manager™

The Stansteel Tank Manager System allows you to monitor and regulate all of your AC tanks and hotmix silos. Users can set individual tank high/low parameters for level and temperature to initiate a pump shutdown, thus preventing tank overflows. In addition, you can operate AC tank supply, return, and fill valves with the push of a button.

The System also allows you to send emails and texts to specific individuals notifying them during alarm events that action needs to be taken, such as "Low Hot Oil Temperature."

Completely mobile-friendly, the System can be operated on a computer or any smart phone. Simply put, the Tank Manager gives you the control to run your business while it runs your tanks.

- Prevent Tank Spills
- Avoid AC Waste and Contamination
- Remote Control All Valves and Pumps
- Know Exact Silo and Tank Levels 24/7 from Anywhere
- New Non-Contact Accu-Level Technology
